

SHIIP Highlights

- There are currently 12 active hospital service sites accessing SHIIP
- SHIIP has identified approximately 3500 patients with complex needs to date
- Five hospitals in the South East LHIN are contributing to SHIIP

New Features of SHIIP

- Notification System
- Expanded dashboard views for visit details
- Patient Quick List from dashboards
- Help content
- User specific patient watch list
- New filter options for all patient searches

Upcoming SHIIP Events

January 28, 2016 - SHIIP
Clinical Working Group

What is SHIIP?

The South East Health Integrated Information Portal (SHIIP) is a secure web portal that is capable of identifying patients with complex needs in real time (or near real time) and providing a comprehensive patient history of hospital encounters. SHIIP allows for effective sharing of patient data among providers within the circle of care, with a goal of facilitating clinical collaboration. SHIIP also offers providers with a fillable electronic Health Links care coordination form that can be easily managed by health care providers.

What has happened since the pilot?

Five hospitals within the South East region are now submitting clinical and administrative data (ADT, DAD, & NACRS) to SHIIP. Primary care sites across the region are expressing interest in becoming an early adopter of SHIIP in order to demonstrate the improved workflow and value available through care coordination. Through the collaboration and dedication of these primary care sites, new features have been added to SHIIP. Some of these new features can be viewed to the left.

What are we working on as we move forward?

Nesda Technologies Ltd. is a local IT services provider that has developed the NesdaTrak system where numerous community support services agencies (e.g. VON) manage their client assessments. Through Nesda's submission of summarized data to SHIIP, information can be communicated to all of the community support organizations who are involved in caring for a person. In order for SHIIP to be an important technology enabler that supports collaborative, multi-agency processes, it is important for the tool to provide a system-wide lens of patient activity in the South East. To further align with this vision and continue supporting Health Links, the development of a comprehensive indicator and reporting component of SHIIP has become a priority. Stakeholders will soon be engaged to finalize the needs and workflow related to this component.

What is required to onboard SHIIP?

We are pleased to support HSPs through onboarding, which begins with an introductory site demonstration of SHIIP; a technical assessment to ensure alignment with eHealth requirements; a review and signing of legal and privacy related documents; establishing a list of needed users with appropriate delegations; and login training, along with other training options.

Privacy/legal considerations?

Healthcare teams who want to access SHIIP are required to sign a participation agreement. To help facilitate the process, organizations should identify their site signatories, as well as team members who require access to SHIIP.

If you would like more information about SHIIP, please don't hesitate to contact:
